| 1.                                 | Resource allocation and management                         |       |      |   |   |
| 2.                                 | Routing protocols and network management                   |       |      |   |   |
| 3. IPV4 and IPV6 routing protocols |  |       |      |   |   |
| 4.                                 | . Network security system                                  |       |      |   |   |

#### UNIT I INTRODUCTION TO PROTOCOLS AND ARCHITECTURE 8 hours

Introduction – Protocols and Architecture – TCP and IP – High Speed Networks – Frame relay- ATM – High Speed LANs Performance modeling and estimation – Queuing analysis – self similarity and self similar traffic.

#### UNIT II NETWORK ROUTING AND TRAFFIC MANAGEMENT 9 hours

Internet Protocol-Connectionless Datagram Delivery- Forwarding IP Datagrams-IPV4 data grams -Packet format – Routing Architecture –Core, Peers and Algorithms-Routing between peers-Routing within Autonomous systems-Routing Information Protocol- RIP-OSPF.Congestion control in data networks and internets – Link level flow and error control – TCP traffic control – Traffic and Congestion control in ATM Networks – Internet routing – graph theory and least cost paths –Interior routing protocols.

#### UNIT III WIRELESS NETWORK TECHNIQUES

Network planning – topologies – fundamentals – signal to interference ratio calculation – capacity expansion techniques – network planning for CDMA systems – Wireless network operations – mobility – radio resources and power management – security.

#### UNIT IV AD HOC NETWORK ANDNETWORK ADDRESSING 9 hours

Internet Addresses- Subnetting and Supernetting- ARP- ARP Packet format, Encapsulation & operation- ARP over ATM- Proxy ARP- RARP-ICMP –ICMP message

types.Introduction WLANs – IEEE 802.11 WLANs – Wireless ATM and HIPERLAN – Adhoc Networking and WPAN – Wireless Geo location systems architecture.

#### UNIT V INTERNET SECURITY AND NETWORK MANAGEMENT 10 hours

Protecting resources - IPSec- Authentication Header-Encapsulating security payload – Secure sockets-Secure Socket Layer (SSL) - Firewalls and Internet access- Packet filter firewall- Proxy firewall- IPv6-Features and packet format-IPV6 Source routing types- Comparison between IPV4 and IPV6.Network Management – Choosing a configuration method – Management Information Base – SNMP – XML – choosing a configuration protocol – COPS Advanced Applications – IP encapsulation – VPNs – Mobile IP – Header Compression – Voice over IP – IP and ATM IP over dial-up links.

#### UNIT II SDN ABSTRACTIONS

#### 14 hrs

How SDN Works - The Openflow Protocol - SDN Controllers: Introduction - General Concepts - VMware - Nicira - VMware/Nicira - OpenFlow-Related - Mininet - NOX/POX - Trema - Ryu - Big Switch Networks/Floodlight - Layer 3 Centric - Plexxi - Cisco OnePK UNIT III PROGRAMMING SDN'S

#### 11 hrs

Network Programmability - Network Function Virtualization - NetApp Development, Network Slicing

#### UNIT IV SDN APPLICATIONS AND USE CASES

14 hrs

SDN in the Data Center - SDN in Other Environments - SDN Applications - SDN Use Cases - The Open Network Operating System 3

#### UNIT V SDN'S FUTURE AND PERSPECTIVES

9 hrs

SDN Open Source - SDN Futures - Final Thoughts and Conclusions

TOTAL- 60 HRS

#### Lab:

Introducing Mininet 3

Setting up the Environment and Implementation of Controllers in Mininet 3 Mininet, Custom Topologies in POX, ODL, Floodlight 3 Click, ONOS, Northbound – Southbound Interfacing, ONOS deployment ONOS – OPNFV – SDN Application development 3

#### UNIT I DATA CENTER EVOLUTION AND SWITCH FABRICS 12 Hours

Networking Basics - Cloud Data Centers and Cloud Networking Characteristics -Mainframes and Servers - Enterprise Cloud and Virtualized Data Centers - Movement to Cloud - Switch Fabric Architecture - Switch Fabric Congestion Management and Flow Control - Switch Fabric Traffic Management - Switch Chip Architecture

#### UNIT II CLOUD DATA CENTER NETWORKING AND STANDARDS 12 Hours

Traditional Multi-tiered Enterprise Networks - Data Center Network Switch Types - Flat Data Center Networks - Rack Scale Architectures - Network Function Virtualization -Ethernet Data Rate Standards - Data Center Bridging - Improving Network Bandwidth - Remote Direct Memory Access

#### UNIT III VIRTUALIZATION AND NETWORKING

Virtual Machines - Virtual Switching - PCI Express and Edge Virtual Bridging - VM Migration - Multi-tenant Environments - Traditional Network Tunneling Protocols - VXLAN and NVGRE Protocols - Tunnel Locations - Load Balancing Algorithms

#### UNIT IV SOFTWARE-DEFINED STORAGE AND NETWORKING 12 Hours

Conventional Storages - Advanced Storage Technologies - Storage Communication Protocols - Software-Defined Storage - Storage in Cloud Data Centers - Data Center Software - OpenStack and OpenFlow - Network Function Virtualization - SDN Deployment

#### 12 Hours

#### UNIT V HIGH-PERFORMANCE COMPUTING AND TRENDS 12 Hours

HPC System Architectures - Multi-socket CPU Boards - HPC Networking Standards -HPC Network Performance Factors - HPC Networking Software - Rack Scale Architectures - Memory and Cabling Technology - Switch Fabric Technology -Software-Defined Infrastructure

#### UNIT I Introduction

The cloud as the next OS, Need and Importance of Cloud as OS - Cloud Challenges -Types of clouds- Public/Private/Hybrid Clouds - Case Studies - OpenStack - Amazon-Google - Microsoft

#### UNIT II Advanced OS Technologies

Introduction to virtualization - Xen, Hyper-V, KVM, Hardware support for virtualization - Memory virtualization (IOMMU) - Network virtualization - SR-IOV - VMQ

#### UNIT III The Cloud OS

Overview & Terminology - The common layers: laaS, PaaS, SaaS, OpenStack / Amazon / Google / Microsoft . Cloud Protocols - Representational state transfer REST -Web Server Gateway Interface (WSGI)

#### **UNIT IV Cloud Storage**

CAP theory - Replication Vs. Erasure coding - Consistent hashing - Case Studies -Swift - Hadoop Distributed File System (HDFS) Vs. Amazon's Simple Storage Service (S3)

#### UNIT V Cloud Network

Software Defined Networking (SDN) - Network Functions Virtualization (NFV) TOTAL-

#### UNIT I Introduction & Mobility Management

#### Introduction-Challenges In Mobile Computing, Coping With Uncertainities, Resource Poorness, Banwidth, Etc. Cellular Architecture, Co-Channel Interference, Frequency Reuse, Capacity Increase By Cell Splitting. Evolution Of Mobile System: Cdma, Fdma, Tdma, Gsm. Mobility Management-Cellular Architecture, Co-Channel Interference, Mobility: Handoff, Types Of Handoffs; Location Management, HIr-VIr Scheme, Hierarchical Scheme. Predictive Location Management

#### **UNIT II Data Mobility & Mobile Transaction**

#### Publishing & Accessing Data In Air- Pull And Push Based Data Delivery Models, Data Dissemination By Broadcast, Broadcast Disks, Directory Service In Air, Energy Efficient Indexing Scheme For Push Based Data Delivery, File System Support For Mobility-Distributed File Sharing For Mobility Support, Coda And Other Storage Manager For Mobility Support, Mobile Transaction And Commerce-Models For Mobile Transaction. Kangaroo And Joey Transactions, Team Transaction. Recovery Model For Mobile Transactions. Electronic Payment And Protocols For Mobile Commerce

# 13 hours

#### UNIT III Introduction To Internet Of Things , IoT and M2M 14 hours

Introduction To Internet Of Things – Definition And Characteristics Of lot, Physical Design Of lot – lot Protocols, lot Communication Models, lot Communication Apis.lot Enabaled Technologies – Wireless Sensor Networks, Cloud Computing, Big Data Analytics, Communication Protocols, Embedded Systems, lot Levels And Templates.Domain Specific lots – Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health And Lifestyle.loT and M2M – Software defined networks, network function virtualization, difference between SDN and NFV for IoT.Basics of IoT System Management with NETCOZF, YANG- NETCONF, YANG, SNMP NETOPEER

#### UNIT IV Introduction to Python & IoT Physical Devices and Endpoints 12 hours

Introduction to Python - Language features of Python, Data types, data structures, Control of flow, functions, modules, packaging, file handling, data/time operations, classes, Exception handling, Python packages - JSON, XML, HTTPLib, URLLib, SMTPLibloT Physical Devices and Endpoints - Introduction to Raspberry PI-Interfaces (serial, SPI, I2C)Programming – Python program with Raspberry PI with focus of interfacing external gadgets, controlling output, reading input from pins.

#### UNIT V IoT Physical Servers and Cloud Offerings

#### 10 hours

IoT Physical Servers and Cloud Offerings – Introduction to Cloud Storage models and communication APIs Webserver – Web server for IoT, Cloud for IoT, Python web application framework, Designing a RESTful web API.

#### TOTAL- 60 HRS

#### Practicals:

- 1. Start Raspberry Pi and try various Linux commands in command terminal window: *ls, cd, touch, mv, rm, man, mkdir, rmdir, tar, gzip, cat, more, less, ps, sudo, cron, chown, chgrp, ping etc*
- Run some python basic programs on Pi like reading name, number, calculating area of shape etc.,Light an LED through Python program,Get input from two switches and switch on corresponding LEDs,Flash an LED at a given on time and off time cycle, where the two times are taken from a file,Flash an LED based on cron output (acts as an alarm).
- Access an image trhough a Pi web cam,Control a light source using web page,Implement an intruder system that sends an alert to the given email,Get the status of a bulb at a remote place (on the LAN) through web,Get an alarm from a remote area (through LAN) if smoke is detected.

#### PURPOSE

This course is designed to provide students with a knowledge of Software Defined Optical networks. In addition to learning the fundamentals of Optical networks, students will also learn how to apply software defined principles could be used to network and manage the optical networking environments.

| INSTRUCTIONAL | OBJECTIVES |
|---------------|------------|
|               |            |

| 1. | To acquire knowledge of Optical networks and its basic principles |
|----|---|
| 2  | To acquire knowledge of SDN and its application areas             |

I o acquire knowledge of SDN and its application areas
 To learn the use of SDN in Optical network environments and its applications

#### UNIT I - INTRODUCTION

Basic Packet-Switching Terminology, Modern Data Center, Traditional Switch Architecture, Autonomous and Dynamic Forwarding Tables, Open Source and Technological Shifts, Evolution of Switches and Control Planes, SDN Implications for Research and Innovation, The Genesis of SDN, The Evolution of Networking Technology, Sustaining SDN Interoperability, Open Source Contributions, Network Virtualization

#### UNIT II – FUNDAMENTALS OF SDN

SDN Operation , SDN Devices , SDN Controller, The OpenFlow Specification, OpenFlow Overview, OpenFlow 1.0 and OpenFlow Basics, OpenFlow 1.1 Additions, OpenFlow 1.2 Additions, OpenFlow 1.3 Additions, OpenFlow Limitations, Alternative Definitions of SDN, Potential Drawbacks of Open SDN, SDN via APIs, SDN via Hypervisor-Based Overlays, SDN via Opening Up the Device, Network Functions Virtualization, Alternatives Overlap and Ranking

#### **UNIT III – SDN IN OTHER ENVIRONMENTS**

Wide Area Networks , Service Provider and Carrier Networks , Campus Networks, Hospitality Networks, Mobile Networks, In-Line Network Functions, Optical Networks, SDN vs. P2P/Overlay Networks

## 9 hours

#### 9 hours Specificat

#### UNIT IV – OPTICAL NETWORKS TECHNOLOGY

Propagation of Signals in Optical Fiber, Components, Modulation and Demodulation, Transmission System Engineering, Evolution from Wavelength-Switched to Flex-Grid Optical Networks, Taking Advantage of Elastic Optical Networks, Routing and Spectrum Allocation, Transmission in Elastic Optical networks

#### UNIT V – SDN IN OPTICAL NETWORKS AND MANAGEMENT 9 hours

Client Layers of the Optical Layer, WDM Network Elements, WDM Network Design, Control and Management, Access Networks, Photonic Packet Switching, Node Architectures for Elastic and Flexible optical networks, Sliceable bandwidth variable transponders, GMPLS Control Plane, SDN in Optical networks, Application based network operations, In-Operation network planning

| The student sha  | all be capable of identifying a problem related | d to th | ie pro | gram o | of    |  |  |
| study and carry out wholesome research on it leading to findings which will      |   |         |        |        |       |  |  |
| facilitate development of a new/improved product, process for the benefit of the |   |         |        |        |       |  |  |
| society.   |   |         |        |        |       |  |  |

M.Tech projects should be socially relevant and research oriented ones. Each student is expected to do an individual project. The project work is carried out in two phases – Phase I in III semester and Phase II in IV semester. Phase II of the project work shall be in continuation of Phase I only. At the completion of a project the student will submit a project report, which will be evaluated (end semester assessment) by duly appointed examiner(s). This evaluation will be based on the project report and a viva voce examination on the project. The method of assessment for both Phase I and Phase II is shown in the following table:

| Assessment   | Tool                        | Weightage |
|--------------|-----------------------------|-----------|
|              | l review                    | 10%       |
|              | II review                   | 15%       |
| In- semester | III review                  | 35%       |
| End semester | Final viva voce examination | 40%       |

Student will be allowed to appear in the final viva voce examination only if he / she has submitted his / her project work in the form of paper for presentation / publication in a conference / journal and produced the proof of acknowledgement of receipt of paper from the organizers / publishers.

#### **UNIT -I AN OVERVIEW ON COOPERATIVE COMMUNICATIONS** 9 hours

Brief History of Cooperative and Relay Channels- Characteristics of Wireless Channels -Techniques to Exploit Spatial Diversity-Capacity of Wireless -Diversity-and-Multiplexing Tradeoff- Decode-and-Forward Relaying Schemes

#### UNIT-II MODES OF COOPERATIVE COMMUNICATIONS

Cooperation protocols- Hierarchical cooperation- Cooperative communications with single relay- Multi-node cooperative communications- Relay selection: when to cooperate and with whom

#### UNIT-III COOPERATIVE NETWORKING

Cognitive multiple access via cooperation- Content-aware cooperative multiple access-Distributed cooperative routing- Broadband cooperative communications

#### UNIT-IV COOPERATION RELAYING

Resource Allocation in Pair-Wise Cooperative OFDM- Cooperative OFDM Systems with Multiple Relays- Cooperation with Slotted ALOHA- Cooperation with CSMA/CA-Throughput Optimal Scheduling Protocols for CooperativeNetworks

#### 9 hours

#### 9 hours

## UNIT-V CROSS-LAYER ISSUES IN COOPERATIVE NETWORKS 9 hours

QoS in Cooperative Networks- Routing in Cooperative Networks- Security Issues in Cooperative Networks - Network lifetime maximization via cooperation

#### TOTAL- 45 HRS

#### UNIT – I - Introduction to Physical Security

Fundamental Concepts - Access Control Models - Cryptographic Concepts - Physical Protections and Attacks - Locks and Safes - Authentication Technologies Direct Attacks Against Computers - Physical Intrusion Detection.

#### UNIT – II - Network Security

Network Security Concepts - The Link Layer - The Network Layer - The Transport Layer - Denial-of-Service Attacks - The Application Layer and DNS - Firewalls -Tunneling - Intrusion Detection - Wireless Networking.

#### UNIT – III - New-Generation Protocols

OpenFlow - VXLAN - NVGRE (Network Virtualization using Generic Routing Encapsulation) - MEF Ethernet - Carrier-Grade Ethernet- TRILL (Transparent Interconnection of a Lot of Links) - LISP (Locator/Identifier Separation Protocols)

#### UNIT – IV - SDN Security Principles

Clearly Define Security Dependencies and Trust Boundaries - Assure Robust Identity - Build Security based on Open Standards - Protect the Information Security Triad -Protect Operational Reference Data - Make Systems Secure by Default - Provide Accountability and Traceability - Properties of Manageable Security Controls

#### Unit – V – Challenges and Issues

Characteristics of SDN - Security Analysis and Potential attacks in SDN - Solutions to the security issues in SDN - Network Security enhancement using the SDN Framework - Issues and Challenges

#### PURPOSE

The purpose of this course is to impart knowledge on design concepts and system level and support required for distributed system.

#### INSTRUCTIONAL OBJECTIVES

To learn of the concepts, principles and technologies of Distributed systems

To introduce advanced idea of peer to peer and file system management.

To understand the issues involved in resource management and process.

#### UNIT I DISTRIBUTED SYSTEMS

Introduction to Distributed Systems - Characterization of Distributed Systems -Distributed Architectural Models - Remote Invocation - Request-Reply Protocols - RPC - RMI - Group Communication - Coordination in Group Communication - Ordered Multicast - Time Ordering - Physical Clock Synchronization - Logical Time and Logical Clocks.

#### UNIT II DISTRIBUTED SECRUITY AND TRANSACTIONS

Introduction - Overview of security techniques - Cryptographic algorithms - Digital signatures - Cryptography pragmatics - Flat and nested distributed transactions -Atomic commit protocols - Concurrency control in distributed transactions - Distributed deadlocks - Transaction recovery

#### UNIT III DISTRIBUTED MUTUAL EXCLUSION ALGORITHMS 9 hours

Introduction - Lamport's algorithm - RicartAgrawala algorithms - Singhal's dynamic information structure algorithm - Lodha and Kshemkalyani's fair mutual exclusion algorithms - Quorum based algorithm - Mackawa's algorithms - Token based algorithms - Roymaond's tree based algorithms

#### UNIT IV DEADLOCK DETECTION IN DISTRIBUTION SYSTEMS 9 hours

System Model - Models of deadlocks - Knapp's classificatioon of distributed deadlock detection algorithms - Mitchell & Merritt's algorithm for the single resource model -ChandyMisra Haas slgorithm for the AND & OR Model - Kshemkalyanisinghal algorithm for P out of Q model - Global predicate detection

#### UNIT V ADVANCED IN DISTRIBUTED SYSTEMS

Authentication in distributed systems - Protocols based on symmetric cryptosystems -Protocols based on asymmetric cryptosystems - Password-based authentication -Authentication protocol failures - Self-stabilization - Peer-to-peer computing and

#### 9 hours

#### 9 hours

overlay graphs - Unstructured overlays - Chord distributed hash table - Content addressable networks (CAN) - Tapestry - Some other challenges in P2P system design - Tradeoffs between table storage and route lengths - Graph structures of complex networks - Internet graphs - Generalized random graph networks - Small-world networks - Scale-free networks - Evolving networks.

#### **UNIT I: MODERN NETWORKING**

Cloud Computing - Internet of Things - Types of Network and Internet Traffic - Demand: Big Data, Cloud Computing, and Mobile Traffic - Requirements: QoS and QoE - Routing Congestion Control - SDN and NFV - Modern Networking Elements

#### UNIT II: SOFTWARE DEFINED NETWORKS

Network Requirements - The SDN Approach - SDN- and NFV-Related Standards -SDN Data Plane - OpenFlow Logical Network Device - OpenFlow Protocol - SDN Control Plane Architecture - REST API - SDN Application Plane Architecture

#### UNIT III: VIRTUALIZATION

Background and Motivation for NFV - Virtual Machines - NFV Concepts - NFV Reference Architecture - NFV Infrastructure - Virtualized Network Functions - NFV Management and Orchestration - NFV Use Cases - SDN and NFV

#### UNIT IV: THE INTERNET OF THINGS: COMPONENTS

The IoT Era - Scope of the Internet of Things - Components of IoT-Enabled Things -IoT World Forum Reference Model - ITU-T IoT Reference Model - IoTivity - Cisco IoT System - ioBridge - SDN and NFV over IoT Deployment

#### UNIT V: SECURITY

Security Requirements - SDN Security - NFV Security - ETSI Security Perspective -IoT Security - The Patching Vulnerability - IoT Security and Privacy Requirements Defined by ITU-T - An IoT Security Framework - The Impact of the New Networking on IT Careers

| 4.          | To know about various cloud service provider      |   |   |   |   |

#### **UNIT I- CLOUD COMPUTING**

Introduction to the Cloud Computing, History of cloud computing, Cloud service options, Cloud Deployment models, Business concerns in the cloud, Exploring virtualization, Load balancing, Hypervisors, Machine imaging, Cloud marketplace overview, Comparison of Cloud providers

#### UNIT II - INFORMATION STORAGE SECURITY AND DESIGN 9 hours

Storage strategy and governance; security and regulations. Designing secure solutions: the considerations and implementations involved. Securing storage in virtualized and cloud environments. Monitoring and management: security auditing and SIFM

#### **UNIT III - STORAGE NETWORK DESIGN**

Architecture of storage, analysis and planning. Storage network design considerations; NAS and FC SANs, hybrid storage networking technologies (iSCSI, FCIP, FCoE), design for storage virtualization in cloud computing, host system design considerations.

#### **UNIT IV - OPTIMIZATION OF CLOUD STORAGE**

Global storage management locations, scalability, operational efficiency. Global storage distribution; terabytes to petabytes and greater. Policy based information management; metadata attitudes; file systems or object storage.

#### UNIT V – CLOUD SERVICE PROVIDER

Cloud Service Providers: EMC, EMC IT, Captiva Cloud Toolkit, Google Cloud Platform, Cloud Storage, Google Cloud Connect, Google Cloud Print, Google App Engine, Amazon Web Services, Amazon Elastic Compute Cloud, Amazon Simple Storage Service, Amazon Simple Queue , Service, Microsoft Windows Azure, Microsoft

#### 9 hours

6 hours

#### 12 hours

Assessment and Planning Toolkit, SharePoint, IBM Cloud Models, IBM Smart Cloud, SAP Labs, SAP HANA Cloud Platform, Virtualization Services Provided by SAP, Sales force, Sales Cloud, ServiceCloud: Knowledge as a Service, Rack space, VMware, Manjra soft Aneka Platform

EMDEDDED EVETEME

#### UNITI- INTRODUCTION TO EMBEDDED SYSTEMS

Embedded system model – embedded standards – block diagrams – powering the hardware - embedded board using von Neuman model. EMBEDDED processors: ISA architecture models – application specific ISA models – general purpose ISA models – instruction level parallelism.

#### **UNIT II - REAL-TIME ENVIRONMENT**

Г

Т

Real-time computer system requirements – classification of real time systems – simplicity – global time – internal and external clock synchronization – real time model. Real – time communication – temporal relations – dependability.

#### **UNIT III - REAL-TIME OPERATING SYSTEMS**

Real –time communication – event triggered – rate constrained – time triggered. Inter component communication – task management – dual role of time – inter task interactions – process input/output – agreement protocols – error detection.

#### **UNIT IV -SYSTEM DESIGN**

Scheduling problem - static & dynamic scheduling – system design – validation – timetriggered architecture.

#### UNIT V – CASE STUDY ON PROGRAMMING EMBEDDED SYSTEMS 9 Hours

Building the blinking LED program-eCos Examples-Embedded linux examples-Extending functionality-optimization techniques.

#### UNIT I – INTRODUCTION

Overview: Why server virtualization –History and re-emergence – Classic virtual machines; VMware, VSphere, KVM, Xen; Taxonomy and basic principles, Architectures comparison - CPU virtualization -Privileged instructions handling - Hypervisor – Para virtualization. Hardware-assisted virtualization. Booting up. Time keeping. CPU scheduling. Commercial examples

#### UNIT II – MEMORY MANAGEMENT IN VIRTUALIZATION 9 hours

Memory management in virtualization: Virtual Storage, partitioning –reclamation – ballooning. Memory sharing. OS-level virtualization –VM Ware –Red Hat Enterprise Virtualization.

#### UNIT III – I/O VIRTUALIZATION

I/O virtualization: Virtualizing I/O devices -monolithic model -virtual I/O server. Virtual networking –tunneling –overlay networks. Commercial examples. Virtual storage: Granularity –Centralized and Distributed File system, system level, blocks level.

#### 9 hours

#### UNIT IV – VIRTUALIZED COMPUTING

Virtualized computing: Virtual machine based distributed computing, elastic cloud computing, clustering, cold and hot migration. Commercial examples. Challenges and future trends.

#### UNIT V – APPLICATIONS

Applications: In distributed computing: Grid and Cloud, Virtual Machine Provisioning, Desktop Virtualization, Application Virtualization, Security for virtualized environments, Business Continuity in virtual environments

#### **UNIT I Software-Defined Networking**

Software-Defined Networking– The Basics-SDN Controllers-A Little History about SDN Controller Platforms-Open Daylight SDN Controllers-What is Open SDN?- SDN in the data center: Sustainable support for tomorrow's applications-Benefits that SDN offers in the data center.

UNIT II Software Defined Networking for Cloud Computing 9 Hours Applying Software-defined Networks to Cloud Computing-. Cloud Computing and Network Virtualization-. Software-defined Networks (SDNs)- Cloud Network Virtualization using SDN- Case Study with Open Daylight and Open Stack- Final Considerations, Challenges and Perspectives

UNIT III Software Defined Networking for Internet-of-Things 9 Hours Why SDN for the IoT? -SDN—Simplicity for the IoT-SDN architecture for IOT - SDN— Scalability for the IoT-SDN—Traffic Flow Optimization for the IoT-Security and Connectivity-The Telco Role

#### UNIT IV SDN for Artificial Intelligence

What is Artificial Intelligence?-Artificial Intelligence in SDN- Load Balance and Flow Routing- Network Security- Intelligent Network Applications.

#### UNIT V SDN for The 5G Networks

Introduction- Evolution of the Wireless Communication towards the 5G- Network Function Virtualization- Information-Centric Networking- Mobile and Wireless Networks- Ubiquitous Connectivity- Mobile Clouds- Cooperative Cellular Networks-Unification of the control plane- Supporting automatic QoS provisioning- Cognitive Network Management and Operation- Role of Satellites in the 5G networks

| 1      | Student should be able to understand graphs ,linear programming            |   |        |       |         |      |  |
|        | problems and statistical concepts.   |   |        |       |         |      |  |
| 2      | Students should be able to apply the concepts in solving the Engineering   |   |        |       |         |      |  |
|        | problems   |   |        |       |         |      |  |

#### **UNIT I - BASICS OF GRAPH THEORY**

Graphs - Data structures for graphs - Subgraphs - Operations on Graphs Connectivity – Networks and the maximum flow - Minimum cut theorem - Trees - Spanning trees - Rooted trees – Matrix representation of graphs.

#### **UNIT II - CLASSES OF GRAPHS**

Eulerian graphs and Hamiltonian graphs - Standard theorems - Planar graphs - Euler's formula - Five colour theorem - Coloring of graphs - Chromatic number (vertex and edge) properties and examples - Directed graphs

#### UNIT III- GRAPH ALGORITHM

Computer Representation of graphs - Basic graph algorithms - Minimal spanning tree algorithm - Kruskal and Prim's algorithm - Shortest path algorithms - Dijsktra's algorithm - DFS and BFS algorithms.

#### **UNIT IV - OPTIMIZATION TECHNIQUES**

Linear programming – Graphical methods – Simplex method (Artificial variables not included) – Transportation and assignment problems.

#### **UNIT V – STATISTICS**

Tchebyshev's inequality – Maximum likelihood estimation – Correlation – Partial correlation – Multiple correlations.

| stocha | hastic processes & queueing theory   |  |     |   |   |   |
| INSTR  | NSTRUCTIONAL OBJECTIVES  |  |     |   |   |   |
| 1      | Compute  | Compute the characteristics of the random variable given the probabilities |     |   |   |   |
| 2      | Understand and apply various distribution                                  |  |     |   |   |   |
| 3      | Solve cases of different Stochastic processes along with their properties. |  |     |   |   |   |
| 4      | Use discrete time finite state Markov chains                               |  |     |   |   |   |
| 5      | Gain sufficient knowledge in principles of queueing theory                 |  |     |   |   |   |

#### **UNIT I - RANDOM VARIABLES**

One dimensional and two dimensional Random Variables – Characteristics of Random Variables : Expectation, Moments.

#### **UNIT II - THEORETICAL DISTRIBUTIONS**

Discrete : Binomial, Poisson, Negative Binomial, Geometric, Uniform Distributions. Continuous: Uniform, Exponential, Erlang and Gamma, Weibull Distributions.

#### **UNIT III - STOCHASTIC PROCESSES**

Classification of Stochastic Processes – Bernoulli process – Poisson process – Pure birth process – Birth and Death process.

#### **UNIT IV - MARKOV CHAINS**

Introduction – Discrete-Parameter Markov Chains – Transition Probability Matrix – Chapman Kolmogorov Theorem – State classification and limiting distributions.

#### **UNIT V- QUEUING THEORY**

Introduction – Characteristics of Markovian Single server and Multi server queuing models [(M/M/1) : ( $\infty$  / FIFO), (M/M/1) : (N / FIFO), (M/M/s) : ( $\infty$  /FIFO)] – M/G/1 Queuing System – Pollaczek Khinchin formula.

## UNIT I-BASIC NUMERACY

 Types and Properties of Numbers, LCM, GCD, Fractions and decimals, Surds

#### UNIT II-ARITHMETIC – I

• Percentages, Profit & Loss, Equations

#### UNIT III-REASONING - I

Logical Reasoning

#### UNIT IV-SOFT SKILLS - I

• Presentation skills, E-mail Etiquette

#### UNIT V-SOFT SKILLS - II

• Goal Setting and Prioritizing

## ASSESSMENT

#### Soft Skills (Internal)

Assessment of presentation and writing skills.

#### **Quantitative Aptitude (External)**

Objective Questions- 60 marks Descriptive case lets- 40 marks\* Duration: 3 hours \*Engineering problems will be given as descriptive case lets.

| 5     | Understand the fundamentals of listening and how one can present in a group discussion |   |       |       |          |       |
| 6     | Prepare or update resume according to the tips presented in class.                     |   |       |       |          |       |

#### UNIT I-ARITHMETIC – II

• Ratios & Proportions, Mixtures & Solutions

#### **UNIT II - MODERN MATHEMATICS**

• Sets & Functions, Data Interpretation, Data Sufficiency

#### UNIT III - REASONING - II

• Analytical Reasoning

#### UNIT IV - COMMUNICATION - I

• Group discussion, Personal interview

#### **UNIT V - COMMUNICATION - II**

• Verbal Reasoning test papers

#### ASSESSMENT Communication (Internal)

- Individuals are put through formal GD and personal interviews.
- Comprehensive assessment of individuals' performance in GD & PI will be carried out.

#### **Quantitative Aptitude (External)**

Objective Questions- 60 marks (30 Verbal +30 Quants) Descriptive case lets- 40 marks\* Duration: 3 hours \*Engineering problems will be given as descriptive case lets.
