

Manasa, final year, IT student, Ramapuram Campus

“There comes a time when each one of us looks back at their life, and speculates on the turn it has taken. As I look back today, I am thankful to SRM, which has not only imbibed in me the qualities worthy of an engineer but also helped me develop into a confident person willing to face the challenges that come my way” said Manasa, one of the SAP students sharing her thoughts at the grand program.

“SRM’s course is designed to stimulate the young minds by encouraging them to question and seek answers. SRM provides a solid platform to the students by keeping them abreast with the latest developments in their fields of study through constant upgradation of the curriculum. It encourages continuous pursuit of knowledge and helps the students attain this goal by providing them a myriad of oppourtunities” she said.

“As may be expected of someone awaiting a prospective semester at MIT, I was ineffably excited. With the advice and encouragement of my professors at SRM, I was intrepid in introducing myself to the completely novel environment. Despite my initial confidence, I was a little overawed about studying in MIT which is one of the world’s best Universities. However, I could adapt to the new environment relatively easily, due to the knowledge and skills I had gained in SRM over the first two years. The strong theoretical understanding of the subjects in SRM helped me solve complex problems at MIT and use the knowledge for practical applications” she maintained.

“Technical development, however, was just one aspect of the multifaceted advantages of SAP. AT MIT, I advanced more as a person when I came in contact with the multifarious and rich culture of the campus. Students from across the globe worked in unity and harmony and the melting pot of cultures also taught me to respect the diversity of humankind...My last few years in both SRM and MIT has shaped me into a more mature human being. I believe that the knowledge is not meant to be locked in one’s closet but to be shared universally” she maintained.
