Department of Networking and Communications

Message from the Editor

Dear Readers,

Greetings to All.

“There is only one thing that makes a dream impossible to achieve: The Fear of Failure.”

With the hidden secret of eternal bliss, we move on to the next intellectual edition of NetComm Bulletin. It gives me immense pleasure to note that response to this newsletter of our department NetComm has been overwhelming. The wide spectrum of achievements in different sections gives me a sense of pride that our students and professors possess creative potential and original thinking in ample measures. Each of their triumphs is entertaining, interesting and absorbing. Writing involves critical thinking-a purposeful and reflective analysis used to reach conclusions. Critical thinking challenges students to scrutinize arguments and positions they may have taken for granted, getting them to develop their points more thoroughly. We hope the faculty and student fraternity will give due importance to the newsletter by contributing their ideas creatively. Such activities can deepen our knowledge and develop our innovative thinking.

We applaud the contributors for their stimulated thoughts and varied hues contributed by them. Commendable job has also been done by the Editorial Board of NWC, the HoD in planning for and producing the Newsletter. My congratulations to the team who took the responsibility for the arduous task most effectively. I am hopeful that this small piece of technical work shall not only develop the taste for reading among students but also develop a sense belonging to the institution as well.

Within the shady locations, Perforate against the crumbling wall which is indiscernible!

Dr.B.Amutha

Editorial Head

About the Department

Department of Networking and Communications under School of Computing intend to meet the expectations of the aspiring students and to add more value to the degrees offered. The Department ensures to provide quality and value-laden education for students in the traditional and contemporary areas of Cloud Computing, Computer Networks, Cyber Security, Information Technology and Internet of Things. The programs are introduced in partnership with reputed IT companies like Amazon Web services, K7 Security, Virtusa etc. The department consists of a medley of faculty members with industrial and academic experience. The Department's keen focus is towards "networks" domain specific and specialization-based placement drives for its students. The department inculcates entrepreneurial skills in budding aspirants to pitch their innovative ideas through SRM Innovation and Incubation Center. Our International and alumni connect intrigue in bridging the gap between the trio: Academics - Industry - Research.

Vision

To Nurture as globally recognizable department in imparting the students high quality education and providing high confidence, unique knowledge and research experience in the field of networking, cyber security, forensics, information technology, cognitive computing and internet of things.

Mission

- ❖ To provide world class IT professionals with appropriate industry and research based curriculum.
- ❖ To train the students in such a way that leads to entrepreneurship and develop societal need based industries.
- ❖ To nourish the students as a socially responsible professionals by providing them training in personality development, ethics and leadership program.

Message from HOD Desk

"Tough times never last and tough people do"

Everyone knows the quote but not all understand the true meaning. Being tough doesn't mean being strong enough to never falter from your path to reach the said destination. It is being strong enough to understand one's own issues and ask for time and help to heal. Stressful situations are present everywhere like a minefield, cross over with patience and when caught on one, be calm and ask for the required support.

Mental health is more of how you drive rather than where you reach. Be strong enough to accept yourself for who you are. It's the start of the refining process.

If you have the Spirit of Understanding everything in a Positive way, You will Enjoy each and every Moment of Life, **whether it's... Pressure or Pleasure...**

Dr. ANNAPURANI PANAIYAPPAN.K,
Professor & Head

Department of Networking and Communications,
School of Computing

PLACEMENT HIGHLIGHTS

- In the 2023 batch, out of 469 students, 388 students got offers in various Marquee, Dream, Super Dream, and Day sharing companies and 610 total offers.

2023 BATCH OFFER DETAILS	
Unique Placement Offers	388
Dream Offers	153
Super Dream	160
Marquee	10
Day Sharing	287

- In the 2024 batch, there are 14 internship offers and 1 Marquee offer.

PLACEMENTS

Placement Training Activities from JULY 2022 To SEPTEMBER 2022

- Amazon Specific Test series are conducted to the group of students. The details of the tests are as follows.
 - a) General Attitude Test is conducted on 15.09.2022
 - b) Coding challenge test is conducted on 17.09.2022
 - c) Technical MCQ based test is conducted on 21.09.2022
- Hacker rank Coding Challenge is conducted on 13.08.2022 for all the students of Dept. of NWC.
- RedHat Linux (RHCSA) Examination Orientation Training is arranged for the students and faculty members in tie up with AdvantagePro. The training is started from 18.08.2022 (Monday) onwards. The details of training are as follows.
 - a) Exam Preparatory Training conducted by Mr.Madan, Trainer, at SRM 18th and 19th Aug between 1 PM to 5 PM.
 - b) Aug 20th and 21st self-practice through VPN, Individual systems have assigned to all the students and faculty members to practice Q and A .
 - c) Aug 22nd Mock test is conducted and followed by Practice (ONLINE).
 - d) Aug 23rd Again Practice – ONLINE.
 - e) Aug 24th and 25th Practice and mock test- At Advantage Pro Centre.
 - f) Aug 26th Final Global Exam.
- The following list of students and faculty members have successfully received the global certification after clearing the RHCSA exam.

ALUMNI MESSAGE

SACHIN MOTWANI

B.TECH (COMPUTER SCIENCE AND ENGINEERING)

with specialization in Cyber Security

(BATCH 2018-2022)

The four important years of any person's life, which acts as a gamechanger were spent in SRM. The first four semesters for us were normal in physical mode. College life before covid was full of a lot of stuff, completing a lot of assignments, lab works, running from UB to Tech Park to attend classes, managing multiple subjects and exams at the same time and much more. It felt hectic at times, but it taught us how to manage pressure and organize ourselves. Our third year was conducted online, which was a different kind of experience, but each day we just used to pray that college reopens as soon as possible!

Although at times we feel overstressed by the burden of assignments, internal tests, projects, club work. But all the hustle was worth it as we came to know about the skill of handling pressure. Participating in fests and other club related events was also fun. Some advice from me would be to explore whatever you want to do, if you feel you want to join a particular club, join it. If you are interested to study a topic, go and explore it. Do not fear that what people will think or so. Also do not come into peer pressure and do anything which you are not interested in. Be independent in your ways. Do enjoy college life but take care that whatever you do does not cause any hindrance to your academic goals.

STUDENT ARTICLES

ARTIFICIAL INTELLIGENCE – A SLOW GROWING CANCER?

PREM MISTRY

REG. NO : RA2011032010040

B. Tech (IoT) - III Year

When we hear the word AI or Robots, the only thing that comes to our mind is them making our lives easier and more comfortable. But what we don't understand is how sophisticated this thing can be. It can make itself smarter every moment it is kept running, which most of us would think is not a problem. When we talk about AI/ML today, it is still in its growing stage and we haven't tested it in sensitive areas, like in Japan, 4 robots were being built and tested for military applications, and something went sideways, and even though the robots were disconnected and one of them was completely destroyed, it still managed to connect itself to a local satellite and build itself back stronger and better and kill 29 Japanese Scientists working on it. It sounds like the Avengers movie but it is true. When we talk about intelligence, we cannot neglect the fact that artificial intelligence can be more intelligent than human intelligence in some cases. We don't know how it thinks, what it thinks, and what it can possibly cause. This is the only difference between AI and humans. We as a human know what is right and what is wrong and we know our boundaries, which might be limiting in some cases, but is perfectly fine in most cases. Whereas in AI, there are no boundaries and we can never predict its next step. We all have heard that AI might take over someday the entire human race, which is definitely not going to be the case because we are the ones who made it. But who knows just like the Asteroid hit earth 66 million years ago killing almost all the non-avian dinosaurs and wiping out many other species on earth, AI might be the next Asteroid that takes over the entire human race?

NEUROMAPS FOR FUTURE ARTIFICIAL INTELLIGENCE

DUSHYANT RAO

REG. NO : RA2011032010040

B. Tech (Cloud Computing) - III Year

No one can catch everything that's going on inside the brain, since it is such a complex organ. Multiple "brain maps" have emerged over the years, with each focusing on different brain processes, from metabolism to cognitive function. These maps are indeed important, but using them in isolation limits the discoveries scientists can make from them. Thanks to advanced computing with AI MRI scanners, we are now able to systematically compare and contextualize generated maps with respect to existing structural and functional annotations of the human brain. More than forty existing brain maps have now been collected in one place by a team. These are called neuromaps, the database will help researchers find correlations between patterns across different brain regions, modalities, spatial scales, brain functions, behavioural patterns using AI.

These neuromaps are intended to serve as a future data repository to assist researchers in differentiating between a relevant association and a random pattern, it offers a standardized space to see each map in comparison to one another and evaluates the statistical significance of these comparisons through rigorous statistical methods. Additionally, the neuromaps database helps standardize the code across maps, to improve the reproducibility of future artificial intelligence. Ultimately neuromaps will add a spark to the analysis of human brain maps and increase the accessibility of data and software tools to people with diverse research interests. As the rate at which new brain maps are generated in the field continues to grow, we hope that neuromaps will provide researchers with a set of standardized workflows for a better understanding of what these data can tell us about the human brain and produce artificial machines with behaviour resembling humans.

CSE – IT

FINAL YEAR K2 SECTION

New Method to systematically find optimal quantum operation sequences for quantum computers developed

Computer scientists have succeeded in developing a method for systematically finding the optimal quantum operation sequence for a quantum computer. They have developed a systematic method that applies optimal control theory (GRAPE algorithm) to identify the theoretically optimal sequence from among all conceivable quantum operation sequences. This method is expected to become a useful tool for medium-scale quantum computers and is expected to contribute to improving the performance of quantum computers and reducing environmental impact in the near future.

1. Algorithms predict sports teams' moves with 80% accuracy.

Algorithms can predict the in-game actions of volleyball players with more than 80% accuracy, and now the lab is collaborating with the Big Red hockey team to expand the research project's applications.

2. Intelligence cooperation to provide surveillance and epidemic services in smart cities

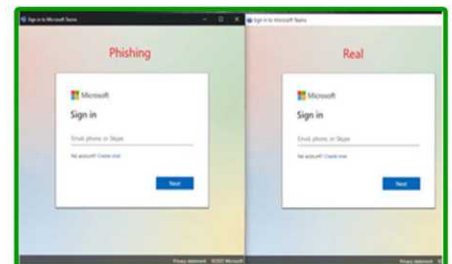

Scientists explore the potential uses of integrated unmanned aerial vehicles and mobile robots for the public good.

CYBER-SECURITY - AWARENESS - NEWS

Hackers Can Use 'App Mode' in Chromium Browsers' for Stealth Phishing Attacks

In what's a new phishing technique, it has been demonstrated that the Application Mode feature in Chromium-based web browsers can be abused to create "realistic desktop phishing applications."

Application Mode is designed to offer native-like experiences in a manner that causes the website to be launched in a separate browser window, while also displaying the website's favicon and hiding the address bar.

Facebook Detects 400 Android and iOS Apps Stealing User Log-in Credentials .

Meta Platforms on Friday disclosed that it had identified over 400 malicious apps on Android and iOS that it said targeted online users with the goal of stealing their Facebook login information.

"These apps were listed on the Google Play Store and Apple's App Store and disguised as photo editors, games, VPN services, business apps, and other utilities to trick people into downloading them," the social media behemoth said in a report shared with The Hacker News.

Biggest Crypto hack !!.

World's largest crypto exchange hacked with possible losses of \$500m Binance, the latest crypto company to experience a targeted hack, temporarily suspends transactions and the transfer of funds.

ACTIVITY CORNER

PUZZLES

PUZZLE OF THE DAY

The bishop must capture all of the pawns without moving to an empty square.

BISHOP
A bishop moves diagonally, in any direction. It can get rid of all four pawns by moving diagonally up and right, then up and left, then down and left, and finally, up and left. Four pawns, four moves. An efficient way to describe this is by writing the moves like this: b5.e8.c6.a8

Kindle and print puzzle books available on Amazon. More from MATCH Curriculum at www.chesscurriculum.io

7		4							
				5				2	
	3								
5				8	2	6			
							7	9	
2	1				6				
							4		1
			9						3
9		6			5				

Find the correct combination of 3 digits (0-9) given that exactly one of the following statements is false:

1. The product of all three digits is greater than 5 and less than 80.
2. The sum of all three digits is greater than 14.
3. The 1st digit is less than 4.
4. The 2nd digit is less than or equal to the 1st digit.
5. The square root of the 1st digit is an integer.
6. The square root of the 2nd digit is an integer.
7. The square root of the 3rd digit is an integer.

Puzzles

Suppose there are four people trying to cross a rather dodgy rope bridge in the middle of the night. Only two of them can cross it any one time and they only have a single flashlight between them. For this reason, one person of each pair must return to help the others get across. But time is limited; they are being chased and need to get across within 17 minutes total. Sounds simple enough, except each person can only cross the bridge at a certain rate. One person takes 1 minute to cross the bridge. The second takes 2 minutes, the third 5 and the last person 10 minutes. Each pair can only cross as fast as the slowest member of the pair. How can they all cross the bridge in time?

Brain Teaser

2

You are in a room that has three switches and a closed door. The switches control three light bulbs on the other side of the door. Once you open the door, you may never touch the switches again. How can you definitively tell which switch is connected to each of the light bulbs?

A man stands on one side of a river, his dog on the other. The man calls his dog, who immediately crosses the river without getting wet and without using a bridge or a boat. How did the dog do it?

If I am holding a bee, what do I have in my eye?

Brain Teaser

7

You measure my life in hours and I serve you by expiring. I'm quick when I'm thin and slow when I'm fat. The wind is my enemy.

Find the Output for the following codes

a.

```
int x = 20;
int y = 30;
int a = 10;
int b = 20;
int c = 60;
int ans = x > y ? c > y ? a+b : c-b : y;
print(ans);
```

b. Given an array of element ar = [1,3,5,7,8,4] and form a binary-tree using a level order traversal. Now traverse the tree in a Preorder fashion and append the elements so it forms a 6-digit number. Do the same for Inorder and Postorder, and find the sum of the numbers formed.

SAP and Internship Opportunities Cell Activities

LoE Ceremony - GAIP NUS held on 23.09.2022

LoE Ceremony for the successfully completed GAIP-NUS summer Internship students in 'Data Analytics using Deep Learning' was held on September 23rd, Friday 2022. In the presence of SRM Officials and Corporate Gurukul team, students received their LoEs and also shared their internship experiences. As part of the event, Corporate Gurukul team proffered an information session to get information about the three programmes, SAP@NUS, SAP@NUS + Capstone with NUS and GAIP among the students. Students got an awareness about the internship opportunities and also met the previous participants of GAIP Summer 2022 and learnt about their experiences!

Conveners and Co-Conveners:

Ms.Safa, Ms.G.Saranya, Dr. Uma Devi and
Dr.A.Helen Victoria

Student Interaction with LaTrobe - Australian University held on 29.09.2022

Cybersecurity students had interaction with the delegates to know about the research works, internship opportunities from LaTrobe - Australian University, thereafter the discussions with the faculty could be future looking to set up an agenda for joint working.

Conveners and Co-Conveners:

Dr.Elizabeth Jesi , Dr.Uma Devi and
Dr.A.Helen Victoria

Speaker : Dr.Naveen Chilamkurti

**“கேடில் விழுச்செல்வம் கல்வி யொருவற்கு
மாடல்ல மற்றை யவை.”**

**“Kaetil Viluchselvam Kalvi Yoruvarku
Maadalla Mattrai Yavai.”**

பொருள்:

**“அழிவில்லாத சிறந்த செல்வம்” என்பது கல்விச் செல்வமே; மற்றைய
பொன் பொருள் மண் என்னும் செல்வங்கள் ஒருவனுக்குச் சிறந்த
செல்வம் ஆகா.**

Explanation :

**Learning is the true imperishable riches; all other things are not
riches.**
