About this programme:

This Professional Development Programme on PROJECT MANAGEMENT focusses on the various stages planning including designing, planning, managing and execution. Also prepares the participants to adapt themselves to the constantly emerging demands of the industry. A major strength of the project management course lies in the takeaways including appropriate skills, knowledge, tools and techniques that later help candidates in mastering the projects with a clear focus on time, budget, and quality.

Project Management Course Benefits:

» Provides additional portable knowledge, skills, techniques, and tools in order to be more successful in managing or delivering projects and programmes.

» Demonstrates to the employer that you have the desire and commitment to learn and improve themselves and therefore raise your individual profile within the organisation. This establishes you as a continuous learner. Learning is a value unto itself and those around you will respect and admire you for it.

» Enhances career development prospects through having achieved an externally recognised project management qualification or certification. It can also be a differentiator against the competition.

» Provides an externally wide benchmark of an individual's project management knowledge and competence.

» You can be a better mentor. The ability to mentor is based greatly on experience, but the best mentors can reach beyond their experience. They are able to reflect on their experience and relate it to someone else's entirely different experience.

Who Should Attend:

» UG / PG students aiming for placements and about to start their academic projects.

» Working executives in charge of managing, executing and delivering projects in IT or Non-IT domains.

» Managers and Leaders who are responsible to manage large, complex, multi-locational and/or business critical projects

» Senior professionals like Project Managers, Planners, Directors, Engineers, Operation Heads, CXO's etc. who may be associated with one or more facets of project or program management.

» Project team members who have proven experience in project execution and now aspiring to move into project management roles.

Course Outline:

- Project Management Framework
- Project Integration Management
- Project Procurement Management
