

Agricultural Vocational Trip: A Day of Learning and Exploration

AGRICULTURAL TRIP @ SRM School of Teacher Education and Research Education and Research

On March 2, 2024, the SRM School of Teacher Education and Research organized an enlightening industrial visit to the SRM College of Agricultural Sciences. We began our journey at 9:30 AM from our college campus, traveling in a bus provided by our management. The excitement was palpable as we set off on our adventure!

At the farm land, we observed honeycomb and received a brief explanation about its significance and maintenance. Some students even got the opportunity to touch and experience it first-hand. We also got to see bees buzzing around the comb, collecting nectar and pollen. It was a sweet start to our day!

Next, we visited the SRM College of Agricultural Sciences, where we were introduced to the basics of agriculture and the concept of greenhouse effects. We learned about the importance of sustainable farming practices and the role of technology in modern agriculture. Our curiosity was piqued, and we asked many questions!

After a brief break, we proceeded to the nursery, where we learned about plant propagation, soil science, and irrigation techniques. We saw various types of plants, including ornamental, indoor, tropical, fruit, and exotic species. Some of us even tried our hand at potting a plant, with varying degrees of success!

Following lunch, we visited the botanical garden, which was a true highlight of our trip. We strolled through the beautifully landscaped gardens, admiring the diverse range of plant species. We saw towering trees, vibrant flowers, and even a few medicinal plants. Our guides shared interesting facts and anecdotes about the plants, keeping us engaged and entertained.

To add some entertainment to our day, we took a group photo session in the gardens, capturing memories of our trip. We also had a fun quiz session on agriculture and botany, testing our knowledge and learning more in the process.

As we departed around 2:30 PM, we felt grateful for the enriching experience and the opportunity to explore the world of agriculture and botany. We returned to our college campus, tired but happy, with memories to cherish and new knowledge to share.
